

Sirs:

Local radio can keep its listenership by offering what the listeners want to hear when they want to hear it, not what they've decided for them to hear. If the locals ratings and/or revenue, which effect one another are dropping due satellite radios traffic and weather reports then maybe they aren't doing their jobs well enough. Maybe they could try more local content, however we know that could entail having to hire more employees which in turn could do harm to their financial statements. Let's not legislate for the sake of local broadcast companies bottom lines.

If this legislation passed would it be illegal for me to tell a friend over a CB radio about traffic or weather that maybe ahead?

I should be able to listen to what I want, when and where I want. If you want me as a listener then you have to earn it, not legislate it.
